My passion for building robust software solutions aligns perfectly with the requirements for the Junior Java Engineer position at Anhui Changtongxing. Having developed full-stack applications and complex desktop tools, I have gained a solid foundation in Java and SQL, which I am eager to apply to your traffic information services projects. My technical background is complemented by a proactive approach to problem-solving, as demonstrated by my independent development of production-ready applications, including AI-integrated platforms. I thrive in environments that demand continuous learning and technical precision. Beyond my core programming skills, my experience with Git, Docker, and Oracle ensures that I can integrate seamlessly into your development lifecycle. I am particularly drawn to your company's focus on traffic information services and am confident that my ability to build scalable, efficient code will contribute to your team's success. I would welcome the opportunity to discuss how my technical skills and dedication to software engineering can support your upcoming initiatives. Please let me know when you might be available for a brief conversation regarding this role.

Atentamente,

Jorge Jaime Sena
