METRICA

Programador/a Full Stack - Junior

Building software that solves real-world problems is what drives me. My experience spans from developing full-stack web applications like 'El Grano de Oro' to creating desktop tools, always focusing on clean code and efficient architecture. I have a strong foundation in JavaScript and Java, and I am comfortable managing deployments using Docker and Git to ensure scalable and reliable results. My technical background is complemented by a proactive approach to learning, which has allowed me to integrate AI models into production environments successfully. I am particularly drawn to the work being done at METRICA and am eager to contribute my skills in SQL database management and front-end development to your team. I thrive in environments that demand both technical precision and creative problem-solving. I am confident that my ability to adapt quickly and my hands-on experience with the full development lifecycle make me a strong fit for your junior developer role. I would welcome the opportunity to discuss how my background and passion for technology can support your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
