GeniusXLab LLC

Junior Full Stack Software Engineer

Building software that moves from concept to production is what drives me. My experience spans the full development lifecycle, from crafting responsive interfaces with JavaScript to managing robust backend logic using Java and SQL. I thrive on solving complex problems, whether I am optimizing database queries or containerizing applications with Docker to ensure seamless deployments. My recent work on 'El Grano de Oro,' a production-ready e-commerce platform integrated with AI, demonstrates my ability to deliver functional, user-centric solutions that go beyond simple code. I am particularly drawn to GeniusXLab LLC because of your commitment to innovative engineering, and I am eager to bring my technical versatility and proactive mindset to your development team. I am confident that my hands-on approach to full-stack development and my ability to adapt quickly to new challenges will allow me to contribute effectively to your ongoing projects from day one. I would welcome the opportunity to discuss how my background in Java and JavaScript aligns with the goals of your engineering team. Are you available for a brief conversation next week to explore how I can add value to GeniusXLab?

Atentamente,

Jorge Jaime Sena
