Inspiring Search

Junior Full Stack Developer

Building functional, user-centric applications is what drives me, and I have spent the last few years turning that passion into production-ready software. My experience spans the full development lifecycle, from crafting responsive interfaces with HTML, CSS, and JavaScript to architecting robust back-end solutions using Java and SQL. I thrive on solving complex problems, whether it is integrating AI models into e-commerce platforms or developing desktop utilities that streamline user workflows.

What sets my approach apart is my commitment to autonomy and continuous learning. I do not just write code; I build tools that solve real-world business challenges, such as my recent work on an AI-powered e-commerce site and a custom music management application. I am comfortable working across the stack and am eager to bring this hands-on technical mindset to the team at Inspiring Search.

I am confident that my technical foundation and proactive problem-solving skills align perfectly with the goals of your development team. I would welcome the opportunity to discuss how my background in JavaScript, Java, and database management can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
