Adistec

Junior Java Developer

My passion for building robust software solutions has led me to develop a strong foundation in Java, which I have consistently applied to create functional, real-world applications. Beyond academic training, I thrive on the challenge of full-stack development, having successfully deployed projects that integrate complex logic with user-centric interfaces. My technical toolkit, which includes Java, SQL, and Docker, allows me to approach backend architecture with both precision and scalability in mind. I am particularly drawn to this Junior Java Developer role at Adistec because of your reputation for technical excellence and innovation. I am eager to bring my proactive problem-solving mindset and my experience in automating workflows to your engineering team. Having managed the entire lifecycle of my own projects—from database design to deployment—I am confident in my ability to contribute effectively to your ongoing development initiatives. I would welcome the opportunity to discuss how my technical background and dedication to clean, efficient code align with the goals of your team. Please let me know when you might be available for a brief conversation to explore this further.

Atentamente,

Jorge Jaime Sena
