Digitalparking AG

Junior Full-Stack Software Engineer

Building software that solves real-world problems is what drives me. My experience spans from developing full-stack web applications like 'El Grano de Oro' to creating desktop tools, always focusing on clean architecture and efficient data management. I am particularly drawn to this role at Digitalparking AG because it aligns perfectly with my technical background in JavaScript and Java, combined with my passion for building scalable solutions.

Throughout my projects, I have leveraged SQL for robust database management and utilized Docker to ensure consistent deployment environments. My ability to integrate complex features, such as AI-driven assistants, demonstrates my commitment to delivering high-quality, user-centric software. I am comfortable working with Git in collaborative environments and thrive in fast-paced settings where continuous learning is the norm.

I am eager to bring my technical versatility and proactive problem-solving mindset to your engineering team. I would appreciate the opportunity to discuss how my skills in full-stack development can contribute to the ongoing success of your projects. Are you available for a brief call next week to explore how I can add value to Digitalparking AG?

Atentamente,

Jorge Jaime Sena
