Lumion

Junior Full Stack Software Engineer

Building functional, production-ready applications is what drives me every day. My experience developing full-stack solutions, such as 'El Grano de Oro', has allowed me to master the end-to-end lifecycle of web development using JavaScript, from designing intuitive interfaces to managing backend databases and integrating AI-driven features. I thrive on solving complex technical challenges and am constantly refining my skills to build software that provides real value to users.

Beyond my academic background in Multiplatform Application Development and Industrial Engineering, I have a proven track record of deploying independent projects. Whether it is creating automated desktop tools or responsive web platforms, I focus on writing clean, efficient code and ensuring seamless deployment. My ability to work with modern tools like Docker and Git, combined with a C1 level of English, ensures I can contribute effectively to international teams from day one.

I am eager to bring my technical versatility and proactive mindset to the engineering team at Lumion. I would welcome the opportunity to discuss how my hands-on experience with JavaScript and full-stack development aligns with your current goals. Are you available for a brief conversation next week to explore how I can contribute to your upcoming projects?

Atentamente,

Jorge Jaime Sena
