Snoop Pty Ltd

Junior Software Engineer

Building software that bridges the gap between complex logic and user-centric design is what drives my daily development. Having successfully deployed full-stack projects like 'El Grano de Oro', where I integrated AI-driven recommendation engines and automated notification systems, I have developed a practical approach to solving real-world business problems. My technical foundation in JavaScript, Java, and SQL, combined with my experience in containerization with Docker, allows me to build scalable and efficient applications from the ground up. I am particularly drawn to Snoop Pty Ltd because of your commitment to innovative engineering solutions. My ability to adapt quickly, paired with my C1 English proficiency, ensures that I can contribute effectively to your international team from day one. I am eager to bring my hands-on experience in full-stack development and AI integration to your engineering department. I would welcome the opportunity to discuss how my background in building production-ready software aligns with the goals of your team. Are you available for a brief conversation next week to explore how I can contribute to Snoop Pty Ltd?

Atentamente,

Jorge Jaime Sena
