Domus Global

Ingeniero/a de Software Junior

Building software that solves real-world problems is what drives me, and I have been following Domus Global's innovative approach to technology with great interest. My background in Multiplatform Application Development and Industrial Engineering has provided me with a strong technical foundation, which I have actively applied by deploying full-stack projects like 'El Grano de Oro,' a web platform featuring custom AI-driven recommendations and chatbot integration using Gemini. Beyond web development, I enjoy the challenge of building robust desktop tools, such as my Music Downloader Pro, which handles complex synchronization tasks. My technical toolkit includes JavaScript, Java, and SQL, complemented by a proactive approach to learning and a C1 level of English that allows me to collaborate effectively in international environments. I am eager to bring my hands-on experience in automation and AI integration to the Junior Software Engineer role at Domus Global. I am confident that my ability to adapt quickly and my passion for clean, functional code will allow me to contribute to your team's success from day one. I would welcome the opportunity to discuss how my technical skills and project experience align with your current development goals. Are you available for a brief call next week to explore this further?

Atentamente,

Jorge Jaime Sena
