BMAT Music Innovators

Python Developer

As a developer with a deep passion for music and a track record of building production-ready applications, I was immediately drawn to BMAT's mission. My experience aligns closely with your technical stack, particularly in building robust backends. I have developed complex systems using Python and have a strong foundation in database management, including PostgreSQL with SQLAlchemy and MongoDB with PyMongo, which I have utilized to handle data-driven projects effectively. Furthermore, I am comfortable working with containerized environments using Docker and managing deployment workflows, ensuring that the software I build is both scalable and reliable. My background includes creating tools that process large datasets and integrate external APIs, skills that I am eager to apply to your core data assets. I am a proactive learner who thrives in collaborative environments, and I am confident that my technical versatility and enthusiasm for music technology would make me a valuable addition to your team. I would welcome the opportunity to discuss how my background in full-stack development and my commitment to high-quality code can contribute to BMAT's ongoing success. Are you available for a brief conversation next week to explore how I can support your engineering team?

Atentamente,

Jorge Jaime Sena
