Haystack

Junior Full Stack Developer

Building software that solves real-world problems is what drives me every day. My experience spans from developing full-stack web applications like 'El Grano de Oro'—which integrates AI-driven recommendations—to creating robust desktop tools using Java and JavaScript. I thrive on the challenge of bridging the gap between complex backend logic and intuitive user interfaces, ensuring that every project I touch is both functional and scalable. My technical toolkit, including SQL for database management and Docker for containerization, allows me to maintain high standards in deployment and development workflows. I am particularly drawn to Haystack because of your commitment to innovation and high-quality engineering. My background in Industrial Engineering, combined with my hands-on development experience, has taught me how to approach technical hurdles with a structured and analytical mindset. I am eager to bring my proactive attitude and technical versatility to your team, contributing to the growth of your current projects while continuing to learn from experienced professionals. I would welcome the opportunity to discuss how my skills in full-stack development can support Haystack's goals. Are you available for a brief conversation next week to explore how I can contribute to your team?

Atentamente,

Jorge Jaime Sena
