Apipana.io

Software Engineer

Building software that bridges the gap between complex logic and user-centric design is what drives me every day. My experience developing full-stack applications, such as the 'El Grano de Oro' e-commerce platform, has allowed me to master the integration of AI models like Gemini into real-world production environments. I am particularly drawn to Apipana.io because of your commitment to innovative software solutions, and I am eager to bring my technical background in JavaScript, Java, and Docker to your engineering team. Beyond my formal education in Multiplatform Application Development and Industrial Engineering, I thrive on solving technical challenges independently. Whether it is building automated desktop tools or deploying responsive web architectures, I focus on writing clean, scalable code that delivers tangible value. My C1 English proficiency ensures I can collaborate effectively in international settings, and my proactive approach to learning keeps me at the forefront of new technologies. I would welcome the opportunity to discuss how my hands-on experience with AI-driven development and full-stack architecture can contribute to the continued success of Apipana.io. Are you available for a brief conversation next week to explore how I can support your current projects?

Atentamente,

Jorge Jaime Sena
