Prestige Trucking Insurance

Junior Software Engineer

Building software that solves real-world problems is what drives me, and I have been following Prestige Trucking Insurance's commitment to digital transformation with great interest. My background in full-stack development, combined with my hands-on experience deploying production-ready applications, aligns perfectly with the technical challenges your team faces. In my recent project, 'El Grano de Oro,' I integrated AI-driven recommendation engines and automated administrative workflows, demonstrating my ability to bridge the gap between complex logic and user-centric design. Beyond web development, I have built robust desktop applications using Java and JavaScript, ensuring seamless cross-platform functionality. My technical toolkit, which includes Docker, SQL, and Git, allows me to contribute effectively to agile development cycles from day one. I am particularly drawn to your company because of the opportunity to apply my skills in automation and software architecture to the insurance sector. I am confident that my proactive approach to problem-solving and my C1-level proficiency in English will allow me to integrate quickly into your international team. I would welcome the chance to discuss how my technical background and passion for building scalable software can support the engineering goals at Prestige Trucking Insurance. Are you available for a brief conversation next week to explore how I can contribute to your upcoming projects?

Atentamente,

Jorge Jaime Sena
