METRICA

Programador/a Junior Full Stack

Building software that solves real-world problems is what drives me, and I have spent the last few years turning that passion into functional, deployed applications. My experience spans the full development lifecycle, from designing responsive interfaces with HTML and CSS to architecting robust backends using Java and JavaScript. I am particularly proud of my work on 'El Grano de Oro,' where I integrated AI models to enhance user experience, demonstrating my ability to move beyond basic CRUD operations into intelligent, scalable solutions. Beyond coding, I am comfortable managing my development environment with Docker and version control via Git, ensuring that my workflows are efficient and production-ready. My background in Industrial Engineering, combined with my current studies in Multiplatform Application Development, has instilled in me a rigorous approach to problem-solving and technical architecture. I am eager to bring this proactive mindset and my technical versatility to the team at METRICA. I would welcome the opportunity to discuss how my hands-on experience with full-stack development and AI integration can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your development team?

Atentamente,

Jorge Jaime Sena
