Liberin Technologies

Backend Engineer

Building robust backend systems is what drives me, and I have been following Liberin Technologies' work in scalable infrastructure with great interest. My technical background in Java and SQL, combined with my hands-on experience in containerizing applications using Docker, aligns perfectly with the challenges your engineering team tackles daily. I am eager to bring my problem-solving mindset to your backend architecture projects.

In my recent projects, I have focused on creating efficient, production-ready software, ranging from complex e-commerce platforms to automated desktop tools. I am particularly comfortable working with relational databases and optimizing server-side logic to ensure high performance. My ability to bridge the gap between technical requirements and functional software, supported by my C1 English proficiency, allows me to integrate seamlessly into international development teams.

I am confident that my proactive approach to learning and my dedication to clean, maintainable code would make me a valuable asset to Liberin Technologies. I would welcome the opportunity to discuss how my technical skills can contribute to your upcoming backend initiatives. Are you available for a brief conversation next week to explore how I can support your team?

Atentamente,

Jorge Jaime Sena
