Odoo

Junior Software Engineer

Building robust software solutions is what drives me, and I have spent the last few years transforming ideas into production-ready applications. My technical background is built on a solid foundation of Python and JavaScript, which I have utilized to develop full-stack projects ranging from e-commerce platforms with AI integration to complex desktop utilities. I am particularly drawn to this role because it aligns perfectly with my experience in managing data-driven workflows and building scalable architectures.

Throughout my recent projects, I have gained significant experience working with PostgreSQL for database management and handling data structures using XML. I thrive in environments where I can solve technical challenges independently while contributing to a larger team goal. My ability to bridge the gap between front-end interfaces and back-end logic allows me to deliver comprehensive solutions that prioritize both functionality and user experience.

I am eager to bring my proactive mindset and technical versatility to your engineering team. I would welcome the opportunity to discuss how my background in software development and my passion for continuous learning can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
