Paces

Software Engineer (Junior)

Building software that solves real-world problems is what drives me, and I have been following Paces' work with great interest. My background in both Industrial Engineering and Software Development has allowed me to bridge the gap between complex logic and functional, user-centric applications. I am particularly drawn to this role because it aligns perfectly with my hands-on experience in full-stack development and my passion for integrating emerging technologies like AI into production environments. Throughout my projects, such as 'El Grano de Oro,' I have leveraged JavaScript, SQL, and Docker to build scalable solutions that go beyond simple code. I am comfortable navigating the entire development lifecycle, from designing responsive interfaces with HTML and CSS to managing backend logic in Java and C. My ability to learn independently and adapt to new technical challenges has been key to deploying my own applications successfully. I am eager to bring this same proactive mindset and technical versatility to the Paces engineering team. I would welcome the opportunity to discuss how my skills in software architecture and my commitment to clean, efficient code can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
