Nimber

Junior (newly graduated)

Building software that solves real-world problems is what drives me, and I have followed Nimber's growth with great interest. My approach to development goes beyond just writing code; I focus on creating end-to-end solutions, from intuitive user interfaces to robust backend logic, as demonstrated in my recent projects like 'El Grano de Oro', where I integrated AI-driven recommendations and virtual assistants to enhance user experience. My technical foundation in JavaScript, Java, and SQL, combined with my experience in deploying production-ready applications, allows me to contribute effectively to your team from day one. I am particularly drawn to Nimber's innovative environment and am eager to apply my skills in automation and full-stack development to help scale your platform. Beyond my technical background, my C1 English proficiency ensures I can collaborate seamlessly in international settings. I am confident that my proactive mindset and ability to learn complex systems quickly make me a strong fit for your junior engineering team. I would love to discuss how my hands-on experience with AI integration and web architecture can support Nimber's upcoming goals. Are you available for a brief call next week to explore how I can contribute to your team?

Atentamente,

Jorge Jaime Sena
