Google

Software Engineer, Full Stack

Building scalable software is not just my field of study; it is my primary way of solving real-world problems. My experience spans the entire development lifecycle, from architecting robust backends using Java and SQL to crafting intuitive user interfaces with JavaScript. I have successfully deployed production-ready applications, such as an e-commerce platform integrated with AI-driven recommendation engines, which demonstrates my ability to bridge the gap between complex logic and user-centric design. My technical foundation is complemented by a proactive approach to learning, whether it is containerizing services with Docker or optimizing database queries in Oracle. I thrive in environments that demand both technical rigor and creative problem-solving, and I am eager to bring this mindset to the engineering team at Google. I am confident that my hands-on experience with full-stack development and my commitment to high-quality code align perfectly with the standards of your engineering department. I would welcome the opportunity to discuss how my background in building end-to-end solutions can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
