CaixaBank Tech

Software engineer IA CIBER

Building software that bridges the gap between complex engineering and user-centric AI solutions is what drives my professional growth. Having successfully deployed production-ready applications like 'El Grano de Oro', where I integrated Gemini-based AI for personalized recommendations and automated customer support, I have developed a deep appreciation for the practical application of machine learning in real-world business environments. My background in Industrial Engineering combined with my current studies in Multiplatform Application Development has equipped me with a unique analytical mindset, allowing me to tackle technical challenges with both precision and creativity. I am particularly drawn to the work being done at CaixaBank Tech, as I am eager to contribute my skills in JavaScript, Java, and AI integration to a team that prioritizes innovation and robust software architecture. My experience with Docker and Git ensures that I can seamlessly integrate into your development workflows while maintaining high standards of code quality. I am confident that my proactive approach to problem-solving and my ability to build full-stack solutions will make me a valuable asset to your team. I would welcome the opportunity to discuss how my technical background and passion for AI can contribute to the ongoing success of your projects at CaixaBank Tech. Are you available for a brief conversation next week to explore how my skills align with your current engineering goals?

Atentamente,

Jorge Jaime Sena
