Hadrian

All Levels: Frontend Software Engineer

Building intuitive and performant user interfaces is what drives my daily development process. Having developed full-stack projects like 'El Grano de Oro' and 'Catering SanMor', I have honed my ability to translate complex business requirements into clean, responsive, and functional web experiences using JavaScript, HTML, and CSS. My approach goes beyond simple coding; I focus on creating seamless user journeys that are both visually appealing and technically robust. I am particularly drawn to Hadrian's commitment to engineering excellence and would love to bring my hands-on experience in deploying production-ready web applications to your frontend team. My background in both software development and industrial engineering has instilled in me a disciplined, analytical mindset that allows me to solve technical challenges efficiently. I am eager to contribute to your ongoing projects and learn from the talented team at Hadrian. I would welcome the opportunity to discuss how my technical skills and passion for building high-quality software align with your current needs. Are you available for a brief conversation next week to explore how I can add value to your frontend engineering team?

Atentamente,

Jorge Jaime Sena
