UST

Senior Full-Stack Developer - Remote

My passion for building end-to-end software solutions aligns perfectly with the challenges at UST. Having developed production-ready applications that integrate complex logic and AI-driven features, I thrive on transforming abstract requirements into robust, scalable code. My experience building full-stack projects using React, Node.js, and Python has provided me with the technical agility needed to develop the profitability calculation engines your team requires. Beyond the front-end, I have a strong foundation in data modeling and relational databases, including SQL, Oracle, and PostgreSQL, which allows me to handle large datasets with precision. I am particularly drawn to this role because it demands both analytical rigor and the ability to rapidly master new domains. My background in Industrial Engineering, combined with my hands-on experience in deploying REST APIs, ensures that I can bridge the gap between complex mathematical logic and functional, high-performance software. I am eager to bring my proactive mindset and technical versatility to your team to help drive UST's digital transformation initiatives. I would welcome the opportunity to discuss how my background in full-stack development and data-driven applications can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
