Galadrim

Software Engineer - Madrid

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me. My recent work on 'El Grano de Oro' demonstrates my ability to deploy full-stack solutions, specifically integrating AI models like Gemini to enhance user experience through personalized recommendations and automated support. I thrive on turning technical challenges into production-ready applications, whether it is a desktop tool for music management or a responsive corporate web platform.

My background in Industrial Engineering and current studies in Multiplatform Application Development have provided me with a rigorous approach to problem-solving. I am comfortable working across the stack, from database management with SQL to frontend implementation, and I am eager to bring this versatility to the engineering team at Galadrim. My C1 English proficiency ensures I can collaborate effectively in international environments and contribute to high-level technical discussions from day one.

I am particularly impressed by Galadrim's commitment to innovation and would love to discuss how my hands-on experience with JavaScript, Docker, and AI integration can contribute to your upcoming projects. Are you available for a brief call next week to explore how my technical background aligns with your team's goals?

Atentamente,

Jorge Jaime Sena
