Leadtech

AI Full Stack Developer

I have been following the work at AI-LAB with great interest, particularly your focus on building scalable AI-driven products. My background in developing full-stack applications, combined with my hands-on experience integrating LLMs like Gemini into production environments, aligns perfectly with your need for a developer who can bridge the gap between complex AI workflows and seamless user experiences. In my recent project, 'El Grano de Oro,' I built a complete e-commerce platform featuring an AI-powered virtual assistant, which gave me practical experience in managing end-to-end data flows and user interactions. I am highly proficient in the modern stack you utilize, including Next.js, TypeScript, and PostgreSQL, and I am eager to apply my skills in NestJS and Prisma to help scale your backend services. I thrive in fast-paced environments where pragmatic problem-solving and clean, maintainable code are the standard. I am particularly excited about the opportunity to work with the Claude SDK and explore the Model Context Protocol to create more intelligent, agentic tools. I would love to discuss how my proactive approach to development and my passion for AI can contribute to the continued success of your team. Are you available for a brief call next week to explore how I can add value to your current projects?

Atentamente,

Jorge Jaime Sena
