Quantiq

Software Developer- New Graduate

Building software that solves real-world problems is what drives me, and seeing my projects like 'El Grano de Oro'—a fully functional e-commerce platform with integrated AI—live in production has been a rewarding challenge. As a developer who bridges the gap between complex backend logic and intuitive user interfaces, I am eager to bring my technical background in JavaScript, Java, and SQL to the team at Quantiq. My approach is rooted in constant learning, whether I am optimizing database queries or implementing AI-driven features to enhance user experience. Beyond my academic foundation in Industrial Engineering and Multiplatform Application Development, I have spent my time building and deploying desktop and web applications that demonstrate my ability to manage the full development lifecycle. I am particularly drawn to Quantiq's commitment to innovation and excellence, and I am confident that my proactive mindset and technical versatility will allow me to contribute effectively to your development team from day one. I would welcome the opportunity to discuss how my skills in full-stack development and AI integration align with your current goals. Are you available for a brief conversation next week to explore how I can support your upcoming projects?

Atentamente,

Jorge Jaime Sena
