Plogg

FRONT END WEB PROGRAMMER

Building functional and visually engaging web interfaces is what drives me. My experience developing full-stack projects, such as the 'El Grano de Oro' e-commerce platform, has allowed me to master the nuances of JavaScript, HTML, and CSS to create seamless user experiences. I thrive on turning complex requirements into clean, responsive code that performs reliably in production environments. Beyond just writing code, I focus on building tools that solve real-world problems, whether through intuitive UI design or efficient state management. My background in both software development and industrial engineering gives me a unique analytical perspective on how to structure web applications for scalability and performance. I am eager to bring this proactive, problem-solving mindset to the front-end team at Plogg. I would welcome the opportunity to discuss how my technical skills and passion for modern web development can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
