## **Texas Sports Academy**

Junior Software Engineer, AI-Forward

Building software that bridges the gap between functional web applications and intelligent automation is what drives my development process. My recent work on 'El Grano de Oro' demonstrates my ability to move beyond standard web development by integrating Gemini-powered AI assistants and personalized recommendation engines into live, production-ready environments. I am eager to bring this hands-on experience in full-stack development and AI integration to the Junior Software Engineer role at Texas Sports Academy.

My technical background, spanning JavaScript, Java, and Docker, allows me to approach complex engineering challenges with a focus on scalability and user experience. Whether I am architecting desktop applications like my Music Downloader Pro or deploying responsive web platforms, I prioritize clean code and efficient problem-solving. I thrive in environments that demand rapid adaptation and technical autonomy, qualities I have cultivated through my ongoing studies in Industrial Engineering and Multiplatform Application Development.

I am particularly excited about the prospect of contributing to AI-forward projects at Texas Sports Academy. I am confident that my proactive approach to learning and my practical experience with LLMs will allow me to add immediate value to your engineering team. I would welcome the opportunity to discuss how my technical skills and passion for AI can support your upcoming initiatives. Are you available for a brief conversation next week to explore how I can contribute to your team?

Atentamente,

**Jorge Jaime Sena**
