Ookla

Software Engineer II - Frontend

Building high-performance, data-driven applications is what drives me. Having followed Ookla's impact on global connectivity, I am eager to contribute to the team responsible for the platforms that visualize and analyze critical network data. My background in developing full-stack solutions, including my work on 'El Grano de Oro'—a platform featuring AI-driven recommendations and complex administrative panels—aligns perfectly with your need for engineers who can build scalable, interactive web experiences.

In my recent projects, I have leveraged React, Vite, and JavaScript to create responsive interfaces that prioritize user experience. I am particularly comfortable working across the stack, having developed RESTful APIs with Node.js and integrated AI models to solve real-world problems. My approach to development is rooted in clean, maintainable code, and I am constantly looking for ways to optimize performance, whether through efficient state management or streamlined build processes.

I thrive in dynamic environments where cross-functional collaboration is key to success. I am confident that my technical foundation, combined with my passion for building tools that provide actionable insights, would allow me to make an immediate contribution to your squad. I would welcome the opportunity to discuss how my experience with modern web technologies can support Ookla's mission to improve global connectivity. Are you available for a brief conversation next week to explore this further?

Atentamente,

Jorge Jaime Sena
