Ookla

Software Engineer II

Building scalable, user-centric applications is what drives me. Having developed full-stack projects like my AI-integrated e-commerce platform, I have gained hands-on experience in the entire development lifecycle—from designing intuitive React frontends to managing robust PostgreSQL databases and deploying solutions that handle real-world traffic. I am particularly drawn to this role because it aligns perfectly with my passion for high-availability systems and my desire to work with a tech stack that includes Python, Django, and AWS.

My background in both Software Development and Industrial Engineering has instilled in me a disciplined approach to problem-solving and a deep appreciation for system reliability. I am comfortable working with CI/CD workflows and containerization, and I thrive in environments where clean, maintainable code is the standard. I am eager to bring my proactive mindset and technical versatility to the team, contributing to the high-impact connectivity insights that Ookla provides to millions of users.

I am confident that my ability to learn quickly and my experience in deploying production-ready applications make me a strong fit for your engineering team. I would welcome the opportunity to discuss how my technical skills and dedication to software excellence can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
