KITRO

Software Engineer Intern

Building technology that drives sustainable change is exactly the kind of challenge I am looking for. My background in developing full-stack applications, combined with a passion for integrating AI into real-world solutions, aligns perfectly with the mission at KITRO to reduce food waste through data-driven insights. I have spent the last year building and deploying projects like 'El Grano de Oro,' a platform that leverages AI to provide personalized recommendations, which has given me hands-on experience in managing the full development lifecycle from database design to front-end implementation.

In my recent work, I have utilized React and TypeScript to build responsive interfaces, while relying on Python and PostgreSQL to handle backend logic and data management. I am comfortable working with Git for version control and have experience deploying applications to the cloud, ensuring they are scalable and reliable. My approach to development is rooted in curiosity and a commitment to writing clean, maintainable code that solves actual user problems.

I am eager to bring my technical skills and proactive mindset to your engineering team. I thrive in collaborative environments and am ready to contribute to your product features while learning from the experienced engineers at KITRO. I would welcome the opportunity to discuss how my background in building production-ready applications can support your sustainability goals. Are you available for a brief conversation next week to explore how I can contribute to your team?

Atentamente,

Jorge Jaime Sena
