Tripadvisor

Junior Software Engineer

Building software that solves real-world problems is what drives me, and I have followed Tripadvisor's impact on the travel industry with great admiration. My background in full-stack development, combined with a passion for integrating AI into user-facing applications, aligns perfectly with the innovative culture at your company. In my recent project, 'El Grano de Oro,' I developed a full-stack e-commerce platform featuring a custom AI-driven virtual assistant and personalized recommendation algorithms, all deployed and currently in production. This experience allowed me to bridge the gap between complex backend logic and intuitive user interfaces. Beyond web development, I have built robust desktop applications using Java and JavaScript, focusing on automation and seamless user experiences. My technical foundation, supported by my ongoing studies in Multiplatform Application Development and Industrial Engineering, has taught me how to tackle complex architectural challenges with a pragmatic mindset. I am eager to bring my proactive approach, C1-level English proficiency, and technical versatility to the Tripadvisor engineering team. I would welcome the opportunity to discuss how my hands-on experience with AI integration and full-stack development can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
