DTN

Software Engineer

Building software that bridges the gap between complex technical requirements and user-centric solutions is what drives my daily work. My experience developing full-stack applications, such as the 'El Grano de Oro' e-commerce platform, has allowed me to master the integration of AI models like Gemini while managing end-to-end deployment. I am particularly drawn to the Software Engineer role at DTN because of your commitment to high-impact technical solutions, and I am eager to bring my proficiency in JavaScript, Java, and Docker to your engineering team. Beyond my formal studies in Multiplatform Application Development and Industrial Engineering, I thrive on building production-ready tools, including desktop applications and automated systems. My ability to solve problems independently, combined with a C1 English proficiency, ensures that I can contribute effectively to international projects from day one. I am confident that my hands-on approach to development and my passion for automation align perfectly with the challenges your team tackles. I would welcome the opportunity to discuss how my technical background and project experience can support DTN's goals. Are you available for a brief conversation next week to explore how I can add value to your current initiatives?

Atentamente,

Jorge Jaime Sena
