CloudLinux

C Developer Intern (worldwide, remote)

My passion for low-level systems and software stability aligns perfectly with the mission of the Endless Lifecycle Support team at CloudLinux. As a developer currently pursuing both a degree in Industrial Engineering and a specialization in Multiplatform Application Development, I have spent significant time working with C and exploring the intricacies of the GNU/Linux environment. I am particularly drawn to the challenge of backporting security patches and ensuring long-term system reliability, as I enjoy the analytical rigor required to maintain legacy codebases.

Throughout my projects, I have relied heavily on Git for version control and Shell scripting to automate my development workflows. My experience extends to building and troubleshooting software in Linux environments, and I am highly comfortable leveraging AI coding assistants to accelerate debugging and code review processes. I understand that effective AI-assisted development requires a critical eye, and I am adept at validating outputs to ensure they meet high-quality standards.

I am eager to bring my technical curiosity and my C programming fundamentals to your team. I am confident that my ability to learn quickly and my proactive approach to problem-solving will allow me to contribute meaningfully to your security-focused initiatives. I would welcome the opportunity to discuss how my background and my commitment to clean, maintainable code can support CloudLinux's goals. Are you available for a brief call next week to discuss the internship program?

Atentamente,

Jorge Jaime Sena
