Nerdio

Junior UI/UX Designer

Nerdio's mission to simplify complex IT environments through intuitive cloud management resonates deeply with my background as a developer who prioritizes user-centric functionality. Having built full-stack applications like 'El Grano de Oro,' I understand the critical balance between technical architecture and a seamless interface. I am eager to transition my focus toward UI/UX design, where I can leverage my technical foundation to build more effective, accessible, and scalable product experiences.

My experience in software development has equipped me with a unique perspective on the design-to-development handoff. I am highly proficient in Figma and Adobe Creative Suite, and I have actively integrated AI-assisted workflows—including Claude Design and Figma Make—to accelerate prototyping and iterate on visual concepts rapidly. I thrive in collaborative environments where feedback is the primary driver for improvement, and I am comfortable working alongside developers to maintain consistent design systems.

I am particularly drawn to Nerdio's fast-paced, global culture and the opportunity to contribute to the AVD transformation. I am confident that my ability to bridge the gap between complex technical constraints and user needs will allow me to hit the ground running. I would welcome the chance to discuss how my technical background and design skills can support your product team's goals. Are you available for a brief conversation next week?

Atentamente,

Jorge Jaime Sena
