DEKRA

Electronic Engineer (m/f/d)

My background in Industrial Engineering and my hands-on experience with C and embedded systems development align perfectly with the Electronic Engineer role at DEKRA. I have always been driven by the challenge of understanding how hardware and firmware interact, and I am eager to apply this passion to the security evaluation of SoCs and microcontrollers within your Digital Trust Services team. Throughout my academic and personal projects, I have developed a strong foundation in C and low-level logic, which I believe is essential for the research-oriented tasks you describe, such as fault injection and side-channel analysis. My experience building custom desktop applications and integrating complex AI models demonstrates my ability to solve intricate technical problems independently and efficiently. I am particularly drawn to DEKRA's commitment to safety and innovation in the digital age. I am confident that my technical curiosity, combined with my C1 English proficiency, will allow me to contribute effectively to your multidisciplinary team in Málaga. I would welcome the opportunity to discuss how my skills in firmware and hardware analysis can support your upcoming R&D projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
