## **Cognizant**

Full Stack Software Developer Junior

Building software that solves real-world problems is what drives me. My journey as a developer has been defined by taking projects from concept to production, such as my e-commerce platform for 'El Grano de Oro,' where I integrated AI-driven recommendations and automated workflows. I am eager to bring this hands-on experience to the Full Stack Developer role at Cognizant, where I can contribute to your team's innovative solutions.

My technical foundation is built on JavaScript, HTML, and CSS for dynamic front-end experiences, complemented by Java and SQL for robust back-end architecture. Beyond these core technologies, I am comfortable working with Docker and Git, ensuring that my code is not only functional but also scalable and maintainable. My background in Industrial Engineering and my current studies in Multiplatform Application Development have sharpened my analytical approach to complex technical challenges.

I thrive in environments that demand continuous learning and adaptability. With a C1 level in English and a passion for integrating emerging technologies like AI into practical applications, I am ready to hit the ground running. I would welcome the opportunity to discuss how my technical skills and proactive mindset can support Cognizant's upcoming projects. Are you available for a brief conversation next week to explore how I can contribute to your team?

Atentamente,

**Jorge Jaime Sena**
