Odoo

Junior Software Engineer

Building scalable software solutions is what drives me, and I have been closely following Odoo's impact on business management systems. My background in full-stack development, combined with a strong foundation in Python and PostgreSQL, aligns perfectly with the technical requirements of your Junior Software Engineer role. I am eager to apply my problem-solving skills to help enhance the Odoo ecosystem and contribute to its continued growth.

In my recent projects, I have focused on creating robust applications that bridge the gap between complex backend logic and user-friendly interfaces. My experience with database management and automation allows me to build efficient systems that solve real-world problems. I am particularly drawn to Odoo because of its modular architecture and the challenge of working with such a versatile, high-performance framework.

I am a fast learner who thrives in collaborative environments, and my C1 English proficiency ensures I can communicate effectively within your international teams. I am confident that my technical curiosity and hands-on experience will allow me to make an immediate impact on your development team. I would welcome the opportunity to discuss how my skills can support your upcoming projects; are you available for a brief call next week?

Atentamente,

Jorge Jaime Sena
