Blossom

Software Engineer (All Levels)

Building software that solves real-world problems is what drives me, and I have been following Blossom's innovative approach to engineering with great interest. My background combines a solid foundation in Java and C with a strong focus on full-stack development using JavaScript, HTML, and CSS. I thrive on taking projects from concept to production, as demonstrated by my work on e-commerce platforms and desktop applications that integrate AI-driven features. Beyond just writing code, I am deeply committed to modern development workflows, utilizing Docker for containerization and Git for version control to ensure scalable and maintainable solutions. My experience in both academic engineering studies and self-directed projects has taught me how to adapt quickly to new challenges and deliver high-quality results independently. I am eager to bring my technical versatility and passion for automation to the Blossom team. I would welcome the opportunity to discuss how my skills in building robust, user-centric applications can contribute to your upcoming projects. Please let me know when you might be available for a brief conversation.

Atentamente,

Jorge Jaime Sena
