Moab

Software Engineer

Building software that bridges the gap between complex logic and user-centric design is what drives me. My experience spans from developing full-stack web applications like 'El Grano de Oro'—where I integrated AI-driven recommendation engines—to creating robust desktop tools like Music Downloader Pro. These projects have allowed me to master the end-to-end development lifecycle, ensuring that every line of code serves a functional purpose in a production environment. I am particularly drawn to Moab because of your commitment to high-quality engineering and innovative problem-solving. My technical foundation in JavaScript, Java, and SQL, combined with my ability to deploy scalable solutions using Docker, aligns perfectly with the challenges your team tackles daily. Furthermore, my C1 English proficiency ensures I can collaborate effectively in international settings and contribute to technical discussions from day one. I am eager to bring my proactive mindset and hands-on experience to your engineering team. I would welcome the opportunity to discuss how my background in full-stack development and AI integration can contribute to the continued success of Moab. Are you available for a brief conversation next week to explore how I can add value to your current projects?

Atentamente,

Jorge Jaime Sena
