Florza Resourcing

Junior Developer

Building software that bridges the gap between complex technical requirements and user-friendly experiences is what drives me. My journey as a developer is defined by taking projects from concept to production, such as my recent work on 'El Grano de Oro,' where I integrated AI-driven recommendation engines and virtual assistants to enhance customer engagement. I thrive on solving real-world problems, whether through full-stack web development or creating efficient desktop tools like my automated music management application. My technical foundation, built on JavaScript, Java, and SQL, is complemented by a proactive approach to learning and a strong ability to adapt to new environments quickly. With a C1 English proficiency and a background in Industrial Engineering, I bring a structured, analytical mindset to every codebase I touch. I am eager to bring this same dedication and technical versatility to the Junior Developer role at Florza Resourcing. I am confident that my hands-on experience with Vercel deployments, Git workflows, and AI integration will allow me to contribute effectively to your team from day one. I would welcome the opportunity to discuss how my background aligns with your current development goals. Are you available for a brief conversation next week to explore how I can support your upcoming projects?

Atentamente,

Jorge Jaime Sena
