Red Top Resources

Junior Application Developer

Building software that bridges the gap between complex logic and user-centric design is what drives me. My recent work on 'El Grano de Oro' allowed me to implement a full-stack e-commerce solution featuring an AI-powered virtual assistant, which sharpened my ability to integrate LLMs like Gemini into real-world production environments. I am eager to bring this hands-on experience to the Junior Application Developer role at Red Top Resources. Beyond web development, I have a strong foundation in Java, JavaScript, and SQL, complemented by my experience in creating desktop automation tools like my Music Downloader Pro. My background in Industrial Engineering and my current studies in Multiplatform Application Development have instilled in me a disciplined approach to problem-solving and system architecture. I thrive in environments that demand rapid adaptation and technical autonomy. I am confident that my proactive mindset and technical versatility will allow me to contribute effectively to your development team from day one. I would welcome the opportunity to discuss how my skills in full-stack development and AI integration align with the goals of Red Top Resources. Are you available for a brief call next week to explore how I can add value to your upcoming projects?

Atentamente,

Jorge Jaime Sena
