Grupo DEACERO

Analista Desarrollador Junior

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me. My experience developing full-stack applications, such as my recent e-commerce project for 'El Grano de Oro,' has allowed me to master the integration of AI models like Gemini while managing end-to-end deployment. I am particularly drawn to the Junior Developer Analyst role at Grupo DEACERO because it offers the perfect environment to apply my technical background in JavaScript, Java, and SQL to real-world industrial challenges. Beyond my formal education in Multiplatform Application Development and Industrial Engineering, I thrive on solving problems independently and optimizing workflows through automation. My ability to translate business requirements into functional code, combined with my C1 English proficiency, ensures I can contribute effectively to international teams from day one. I am eager to bring my proactive mindset and hands-on experience with Docker and database management to your development team. I would welcome the opportunity to discuss how my technical skills and passion for building scalable solutions align with the goals of Grupo DEACERO. Are you available for a brief conversation next week to explore how I can contribute to your upcoming projects?

Atentamente,

Jorge Jaime Sena
