Medly AI

Junior Fullstack Engineer

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me. My recent work on 'El Grano de Oro' demonstrates my ability to deliver full-stack solutions, specifically by integrating AI models like Gemini to create personalized recommendation engines and virtual assistants. I thrive on taking projects from concept to production, ensuring that every line of code serves a clear purpose. Beyond web development, I have built robust desktop applications and automated workflows, always prioritizing clean architecture and scalability. My technical foundation in JavaScript, combined with my hands-on experience in deploying real-world applications, aligns perfectly with the innovative work being done at Medly AI. I am eager to bring my proactive problem-solving mindset and my ability to adapt quickly to new technologies to your engineering team. I would welcome the opportunity to discuss how my background in full-stack development and AI integration can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to Medly AI?

Atentamente,

Jorge Jaime Sena
