Business Application & Automation Engineer

Building scalable business applications and streamlining workflows through automation is what drives my development process. My experience ranges from creating full-stack e-commerce platforms with integrated AI assistants to developing desktop tools that automate complex data management tasks. I am particularly drawn to this role because it aligns perfectly with my passion for bridging the gap between technical architecture and operational efficiency. In my recent projects, I have successfully implemented automated email notifications and intelligent recommendation systems, ensuring that software not only functions correctly but actively adds value to business processes. My background in Industrial Engineering, combined with my hands-on development work, allows me to approach automation challenges with a focus on both technical precision and business logic. I am confident that my ability to integrate AI models and manage end-to-end application lifecycles will allow me to contribute immediately to your team's objectives. I would welcome the opportunity to discuss how my technical skills and proactive mindset can support your current automation initiatives. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
