Capgemini

Ingeniero/a junior de soporte a proyectos

Building software that solves real-world problems is what drives me, and I have been following Capgemini's impact on large-scale digital transformation projects with great interest. My background in Industrial Engineering and Software Development has allowed me to bridge the gap between complex technical requirements and functional, user-centric applications. In my recent projects, such as an e-commerce platform integrated with Gemini AI, I have demonstrated my ability to manage full-stack development, from database architecture to automated deployment. I am particularly drawn to this junior support role because it offers the perfect environment to apply my technical skills in JavaScript, Java, and SQL while contributing to high-impact engineering solutions. My experience with Docker and Git ensures that I can integrate seamlessly into professional development workflows, maintaining clean code and efficient project delivery. I am eager to bring my proactive problem-solving mindset and my C1-level English proficiency to your team. I would welcome the opportunity to discuss how my technical versatility and dedication to continuous learning can support your current project goals. Are you available for a brief conversation next week to explore how I can contribute to Capgemini?

Atentamente,

Jorge Jaime Sena
