TNG Technology Consulting

Software Developer / IT Consultant (m/f/d)

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me. My experience spans from developing full-stack web applications like 'El Grano de Oro'—which integrates AI-driven recommendations—to creating robust desktop tools using Java and C. I thrive on solving technical challenges, whether it is optimizing database queries with SQL or containerizing services with Docker to ensure seamless deployment. My background in Industrial Engineering, combined with my current studies in Multiplatform Application Development, has instilled in me a rigorous approach to problem-solving and system architecture. I am particularly drawn to TNG Technology Consulting because of your reputation for tackling high-level technical projects that require both creativity and precision. I am confident that my proficiency in JavaScript, Java, and Git, paired with my ability to learn new technologies rapidly, would allow me to contribute effectively to your consulting team from day one. I would welcome the opportunity to discuss how my technical background and passion for building production-ready software align with the goals of your current projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
