Haystack

Junior Full Stack Developer

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me every day. My experience developing full-stack projects, such as an AI-integrated e-commerce platform, has allowed me to master the end-to-end development lifecycle using JavaScript, Java, and SQL. I am particularly drawn to Haystack because of your commitment to scalable solutions, and I am confident that my technical background in Docker and Git will allow me to contribute effectively to your development team from day one.

Beyond my formal education in Multiplatform Application Development and Industrial Engineering, I have spent my time building and deploying real-world applications. Whether it is optimizing database queries or containerizing services, I thrive on solving technical challenges independently. My ability to integrate AI models into web environments has taught me how to deliver high-value features that go beyond standard requirements.

I am eager to bring my proactive mindset and technical versatility to Haystack. I would welcome the opportunity to discuss how my skills in full-stack development and my passion for automation align with your current projects. Are you available for a brief conversation next week to explore how I can contribute to your team?

Atentamente,

Jorge Jaime Sena
