The University of Sheffield

Junior Developer (x2)

Building software that solves real-world problems has been my primary focus throughout my academic journey in Industrial Engineering and Multiplatform Application Development. My experience goes beyond theory, as I have successfully deployed full-stack web applications and desktop tools, such as my AI-integrated e-commerce platform and automated music management software. These projects have sharpened my proficiency in JavaScript, Java, and SQL, while teaching me how to manage the full development lifecycle from database design to user interface deployment. I am particularly drawn to The University of Sheffield's commitment to innovation and excellence. My ability to integrate AI models like Gemini into functional applications, combined with my C1 English proficiency, ensures that I can contribute effectively to your development team from day one. I am eager to bring my technical versatility and proactive problem-solving mindset to your upcoming projects. I would welcome the opportunity to discuss how my background in building production-ready software aligns with the goals of your development team. Are you available for a brief conversation next week to explore how I can support your current initiatives?

Atentamente,

Jorge Jaime Sena
