FDB UK

Junior Software Developer

Building software that solves real-world problems is what drives me. My recent work on 'El Grano de Oro' demonstrates my ability to bridge the gap between complex backend logic and user-centric design, specifically by integrating AI models like Gemini to provide personalized product recommendations. I thrive on taking projects from concept to production, whether it is a full-stack web application or a desktop utility like my Music Downloader Pro, which handles complex tasks like WiFi synchronization and automated file management. My background in Industrial Engineering and my current studies in Multiplatform Application Development have provided me with a rigorous approach to problem-solving and system architecture. I am highly proficient in JavaScript, Java, and SQL, and I am comfortable working within containerized environments using Docker. With a C1 level of English, I am eager to contribute to the international team at FDB UK and bring my proactive, hands-on mindset to your upcoming projects. I would welcome the opportunity to discuss how my technical skills and passion for automation can add value to your development team. Are you available for a brief conversation next week to explore how I can contribute to FDB UK?

Atentamente,

Jorge Jaime Sena
