Met Office

Junior Software Developer

Building software that solves real-world problems is what drives me. My experience spans from developing full-stack web applications like 'El Grano de Oro,' where I integrated AI-driven recommendation systems and virtual assistants, to creating robust desktop tools like 'Music Downloader Pro.' These projects have allowed me to master JavaScript, Java, and SQL while gaining hands-on experience with deployment and automation. I am particularly drawn to the Met Office because of the critical impact your software has on global climate and weather services. My ability to bridge the gap between complex data and user-friendly interfaces, combined with my background in Industrial Engineering, gives me a unique perspective on building scalable and efficient systems. I am a fast learner who thrives in collaborative environments, and I am confident that my technical versatility and passion for innovation would make me a valuable asset to your development team. I would welcome the opportunity to discuss how my skills in full-stack development and AI integration can contribute to the Met Office's mission. Are you available for a brief conversation next week to explore how I can support your current projects?

Atentamente,

Jorge Jaime Sena
